### 8.2. Suitable engineering parameters

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

### 8.3. Personal Protection Equipment

### 8.3.1. General protection and hygiene applications.

Use only in well ventilated areas.

Keep away from the foods, drinks and animal feed.

Take off your dirty clothes directly.

Wash your hands after handling.

Keep away from contact eye and skin directly.

Don't smoke.

### 8.3.2. Protection the body

### 8.3.2.1. Eye-Face Protection

Avoid contact with the skin and the eyes. Tightly fitting safety goggles, Safety glasses with side shields compatible with EN 166.

### 8.3.2.2. Hand protection

Please take into consideration the specific local conditions under which the product is used, such as the danger of cuts, abrasion, and the contact time., Be aware that in daily use the durability of a chemical resistant protective glove can be notably shorter than the breakthrough time measured according to EN 374, due to the numerous outside influences (e.g., temperature).

### 8.3.2.3. Skin and body protection

Body protection must be chosen based on the level of activity and exposure. Protective suits should be durable for chemical and physical conditions.

### 8.3.2.4. Respiratory protection

No personal respiratory protective equipment is normally required. In inadequately ventilated areas, where workplace limits are exceeded, where unpleasant odors exist or where aerosols are in use, or smoke and mist occur, use a self-contained breathing apparatus or breathing apparatus with a type filter or appropriate combined filter in compliance with EN 141.

### 8.3.3. Heat effects

If the material is heat-critical, the structure of personal protective equipment must be chosen more carefully.
